

**Hassman Research Institute (HRI) announces the opening of their new early phase Inpatient unit in Marlton, NJ.**

**Marlton, NJ, August 1, 2019** - Located at 30 Lake Center in Marlton, NJ, HRI's new state-of-the-art facility is a purpose built, early phase clinical trial inpatient unit capable of executing multiple complex clinical trials in a variety of therapeutic indications.

The facility is an expansive 21,000 square feet and is configured with 60 inpatient beds. In addition, the unit has 3 CLIA waived processing laboratories, a pharmacy with laminar flow hood, private dosing rooms, EEG, PSG and ERP rooms, procedure and recovery rooms and patient population segregation wards. This array of resources and services will allow HRI to continue to be one of the industry leaders executing early phase clinical trials.

*Hassman Research Institute is a leading clinical research organization that conducts studies in a wide variety of therapeutic areas. With over 35 years of experience, HRI is geared for success with its dedication to delivering high quality services to each study participant.*
