

**Hassman Research Institute (HRI) collaborates with Cognitive Research Corporation to add driving simulators at their Berlin, NJ Facility.**

**Berlin, NJ, March 4, 2020** - HRI's collaboration with Cognitive Research Corporation has brought them 5 new driving simulators at their Berlin, NJ Facility. These simulators will be valuable tools that will allow HRI to conduct clinical research on the evaluation of driving ability/performance while taking certain medications.

Clinical studies that utilize the driving simulators produce a realistic driving experience and are a safe and effective way to assess how a drug may impair driving performance. HRI has the adequate space and highly trained staff to conduct these studies, and these exciting new resources will allow the company to remain as an industry leader in clinical trials
